

Bring Order to R&D Inventory

MyAmici replaces scattered spreadsheets, whiteboards, and crisis ordering with an integrated inventory system tailor-made for biotech. Reduce time spent on repeat ordering, prevent stockouts, and keep research flowing with complete clarity and control.

The screenshot shows a web-based inventory management system. At the top, there's a navigation bar with links like 'Inventory', 'Bill of Materials', 'Pick Lists', 'Automated Reorder', 'Inventory Check-In', 'Live Inventory', 'Scan Inventory', 'Cycle Counting', 'Inventory Product', 'Reserved and In Use Summary', 'Inventory Log', and 'Inventory Valuation'. The main area has tabs for 'Purchase' and 'Assets'. Below the tabs, there's a 'Details' section with fields for 'Name' (Barcode demo - 02 May-2026), 'Status' (Submitted), 'Owner' (Sally Inventory Manager), 'Required Date' (02 May-2026), 'Collection' (Click & Collect), 'User Location' (CB Test Zone), and 'Notes'. Below this are 'Pick List Lines' and 'Reserved Lines' tabs, with the 'Reserved Lines' tab currently selected. The table shows items with columns for 'Supplier Part Number', 'Product', 'Lead Time', 'Live Stock', 'SKU', 'Min Stock Level (SKU)', 'Qty Available (SKU)', 'Supplier Pack Size', 'Pack Size', 'EOQ', 'Min Stock Level (Pack Size)', and 'Total Q Stock Order'. The data includes items like '175cm² Tissue culture flask', 'ACRODISC 13 SYRINGE FILTER_NYLON...', and 'RPMI-1640 MEDIUM_w/o L-Glut_1L'.

R&D Inventory combines MyAmici's biotech platform with expert configuration support to centralize stock management, automate reordering, and create a single source of truth for every vial, reagent, and consumable in your lab.

Key Features

Integrated Purchasing

Link inventory directly to purchasing for instant replenishment, consolidated reporting, and traceable order histories — all in one place.

Labelling & Barcodes

Barcode-ready labels and item-level tagging make it easy for scientists to grab and go, while you maintain full stock visibility and control.

Automated Reorder

Minimum stock alerts and automated reorder flows let you top up high-throughput items in seconds — no more manual tracking or surprise shortages.

How It Works

- 1. Understanding Your Needs:** We map your storage, workflows, stock categories, and business rules to design a system that fits how your lab actually works.
- 2. Configuration & Data Setup:** Our team configures the platform for you, uploads your data, and prepares your system for a smooth go-live.
- 3. Training, Hypercare & Success:** We train your team, support them through early adoption, and ensure long-term success with ongoing optimization.
- 4. Automated Reorder:** Use automated reorder flows to top up stock quickly and accurately — zero manual effort required.
- 5. Goods In & Storage:** Check items in on arrival, attach technical documents, and assign them to precise storage locations.
- 6. Scan & Go Dispensing:** Use pick lists, transfer requests, or scan-and-go to issue stock, while maintaining project-level cost allocation.
- 7. Real-Time Insights:** Access live dashboards for valuation, usage, reallocation, and full audit logs — instant clarity for finance, ops, and scientists.

The Value

- ✓ Reduce time spent on manual stock checks and repeat ordering
- ✓ Prevent over-ordering and minimize waste through expiry tracking and minimum stock alerts
- ✓ Increase accuracy with cycle counting and ongoing auditability
- ✓ Avoid stockouts with real-time visibility and automated replenishment
- ✓ Scale inventory control easily across main stores, satellite stores, and multi-site operations

Why MyAmici

MyAmici isn't an add-on or a generic stock tool — it's a biotech-built inventory system supported by specialists who understand scientific workflows and the operational pressure of R&D labs.

We give you:

- **Integrated purchasing and inventory** in one platform
- **Barcode-ready, item-level tracking** for full traceability
- **Automated replenishment** that eliminates manual oversight
- **Scalable** store structures for fast-growing R&D teams
- **Expert onboarding**, configuration, and ongoing support
- **A connected system** that grows with you — from first storeroom to multi-site operations

The Result

Accurate, connected, and stress-free inventory control — a calmer, more efficient lab where scientists can focus on discovery, not firefighting.
